CLASS – 11

WORKSHEET- Laws of Motion

(1 mark questions)

1. Define angle of friction.
   _____
   _____

2. Define impulse.
   _____
   _____

3. Action and reaction are equal and opposite. Why cannot they cancel each other?
   _____
   _____

4. Physical independance of force is a consequence of
   (a) first law of motion   (b) second law of motion
   (c) third law of motion   (d) all of these laws.
   _____
   _____

5. The magnitude of the net force acting on a car moving with a constant velocity of 30 km/h is
   (a) 15N   (b) 20N   (c) 30N   (d) zero
   _____
   _____

6. A body under the action of a force $\vec{F} = 6\hat{i} - \hat{j}$ N acquires an acceleration of 5 ms^{-2}. The mass of the body is
   (a) 2kg   (b) 5kg   (c) 4kg   (d) 6kg
   _____
   _____

7. A book is lying on the table. What is the angle between the action of the book a on the table and the reaction of the table on the book?
   (a) 0°   (b) 45°   (c) 90°   (d) 180°
   _____
   _____

8. Which one of the following statements is not true?
    (a) The same force for the same time causes the same change in momentum for different bodies.
    (b) The rate of change of momentum of a body is directly proportional to the applied force and takes place in the direction the force acts.
    (c) A greater opposing force is needed to stop a heavy body than a light body in the same time, if they are moving with the same speed.
    (d) The greater the change in the momentum in a given time, the lesser is the force that needs to be applied.

    _____
    _____

9. The quantity which remains conserved in rocket repulsion
    (a) Impulse   (b) Force   (c) Momentum   (d) Acceleration

    _____
    _____

10. A body subjected to three concurrent forces is found to be in equilibrium. The resultant of any two forces.
    (a) is equal to third force   (b) is opposite to third force
    (c) is collinear with the third force   (d) all of these

    _____
    _____

11. What is the condition for equilibrium of an object?
    _____
    _____

12. Why are tyres made of rubber not of steel?
    _____
    _____

13. In a tug of war, the team that pushes harder against the ground wins. Why?
    _____
    _____

14. What happens to a stone tied to the end of a string and whirled in a circle if the string suddenly breaks?
    _____
    _____

15. Give the magnitude and direction of the net force acting on
    (a) a drop of rain falling down with a constant speed

    _____
    _____

    (b) a cork of mass 10 g floating on water

    _____
    _____

    (c) a kite skillfully held stationary in the sky

    _____
    _____

    (d) a car moving with a constant velocity of 30 km/h on a rough road

    _____
    _____

    (e) a high-speed electron in space far from all material objects, and free of electric and magnetic fields.

    _____
    _____

16. A pebble of mass 0.05 kg is thrown vertically upwards. Give the direction and magnitude of the net force on the pebble,
    (a) during its upward motion

    _____
    _____

    (b) during its downward motion

    _____
    _____

    (c) at the highest point where it is momentarily at rest. Do your Solutions change if the pebble was thrown at an angle of 45° with the horizontal direction? Ignore air resistance.

    _____
    _____
    [Ans. (a) 0.5N vertically downwards (b) 0.5N vertically downwards (c) 0.5N vertically downwards]

17. Give the magnitude and direction of the net force acting on a stone of mass 0.1 kg,
    (a) just after it is dropped from the window of a stationary train

    _____
    _____

    (b) just after it is dropped from the window of a train running at a constant velocity of 36 km/h

_____
_____

(c) just after it is dropped from the window of a train accelerating with1 m s^{-2}

_____
_____

(d) lying on the floor of a train which is accelerating with 1 m s^{-2}, the stone being at rest relative to the train. Neglect air resistance throughout.

_____
_____

[Ans. (a) 1N vertically downwards (b) 1N vertically downwards (c) 1N vertically downwards (d) 0.1N vertically downwards]

18.   One end of a string of length l is connected to a particle of mass m and the other to a small peg on a smooth horizontal table. If the particle moves in a circle with speed v the net force on the particle (directed towards the centre) is :
(i) T   (ii) T – mv^2/l   (iii) T + mv^2/l   (iv) 0

_____
_____

19.   A constant retarding force of 50 N is applied to a body of mass 20 kg moving initially with a speed of 15 m s^{-1}. How long does the body take to stop?   [Ans. 6s]

_____
_____

20.   A stone of mass m tied to the end of a string is revolving in a vertical circle of radius R. The net force at the lowest and highest points of the circle directed vertically downwards are: (choose the correct alternative).

	Lowest Point	Highest Point
(a)	mg – T$_1$	mg + T$_2$
(b)	mg + T$_1$	mg – T$_2$
(c)	mg + T$_1$ – (mv$_1$^{2})/R	mg – T$_2$ + (mv$_1$^{2})/R
(d)	mg – T$_1$ – (mv$_1$^{2})/R	mg + T$_2$ + (mv$_1$^{2})/R

_____
_____

(2marks questions)

21.   A cyclist riding at a speed of 14√3 ms^{-1} takes a turn around a circular road of radius 20√3m. What is the inclination to the vertical?   [Ans. 60°]

_____

_____

_____

_____

22. An aero-plane travelling at a speed of 500 kmh^{-1} tilts at an angle of 30°as it makes a turn. What is the radius of the curve? [Ans. 3.41×10^3 m]

_____

_____

_____

_____

23. Sand is thrown on tracks covered with snow. Why?

_____

_____

_____

_____

24. It is difficult to move a cycle along a road with its brakes on. Explain.

_____

_____

_____

_____

25. Why do we slip on a rainy day?

_____

_____

_____

_____

26. A horse has to apply more force to start a cart than to keep it moving. Why?

_____

_____

_____

_____

27. A cricketer lowers his hands to catch the ball safely. Explain, why?

_____

_____

28. Why does a cyclist bend inwards while riding along a curved road?

_____
_____
_____
_____

29. State Newton's second law of motion. Show that it gives a measure of force. Hence define 1N force.

_____
_____
_____
_____

30. State that Newton's second law of motion is the real law of motion.

_____
_____
_____
_____

31. State Newton's third law of motion. Derive the law of conservation of linear momentum from it.

_____
_____
_____
_____

32. An astronaut accidently gets separated out of his small spaceship accelerating in inter-stellar space at a constant rate of 100 ms^{-2}. What is the acceleration of the astronaut the instant after he is outside the spaceship?

_____
_____
_____
_____

33. It is difficult to push a box full of clothes than an empty box. Explain.

_____
_____

_____
_____

34.   Prove impulse-momentum theorem.

_____
_____
_____
_____

35.   Why us friction called self-adjusting force?

_____
_____
_____
_____

36.   Proper inflation of tyres of vehicles saves fuel. Why?

_____
_____
_____
_____

37.   How does friction help in walking? Explain.

_____
_____
_____
_____

38.   Use component of force, show that it is easier to pull a lawn roller than to push it.

_____
_____
_____
_____

39.   A nucleus is at rest in the laboratory frame of reference. Show that if it disintegrates into two smaller nuclei, the products must move in opposite directions.

_____
_____
_____
_____

40. A shell of mass 0.020 kg is fired by a gun of mass 100 kg. If the muzzle speed of the shell is 80 ms^{-1}. What is the recoil speed of the gun? [Ans. – 0.016 ms^{-1}]

_____
_____
_____
_____

41. A batsman deflects a ball by an angle of 45° without changing its initial speed which is equal to 54 km/h. What is the impulse imparted to the ball? (Mass of the ball is 0.15 kg.)
[Ans. 4.16 kg/ms]

_____
_____
_____
_____

42. An aircraft executes a horizontal loop at a speed of 720 km/h with its wings banked at 15°. What is the radius of the loop? [Ans. 15.24 km]

_____
_____
_____
_____

(3 marks questions)

43. A bus starts from rest accelerating uniformly with 4 ms^{-2}. At t = 10s, a stone is dropped out of a window of the bus 2m high. What are the (i) magnitude of velocity and (ii) acceleration of the stone at 10.2s? Take g = 10 ms^{-2}. [Ans. 40.04 m/s, 0]

_____
_____
_____
_____
_____
_____

44. A body of mass m moves along X-axis such that its position coordinate at any instant t is $x = at^4 - bt^3 + ct$, where a, b, and c are constants. What is the force acting on the particle at any instant t?

_____
_____
_____

_____
_____
_____

45.   A truck starts from rest and rolls down a hill with constant acceleration. It travels a distance of 400m in 20s. Calculate the acceleration and the force acting on it if its mass is 7 metric tons.   [Ans. 2ms^{-2}, 14000N]

_____
_____
_____
_____
_____
_____
_____

46.   A ball moving with am momentum of 5 kg ms^{-1} strikes against a wall at an angle of 45° and is refracted at the same angle. Calculate the change in momentum.

[Ans. – 7.07 kg ms^{-1}]

_____
_____
_____
_____
_____
_____

47.   A 70kg man in sea is being lifted by a helicopter with the help of a rope which can bear a maximum tension of 100 kg wt. With what maximum acceleration the helicopter should rise so that the rope may not break? Take g = 9.8 ms^{-2}.   [Ans. 4.2 ms^{-2}]

_____
_____
_____
_____
_____
_____

48.   Fuel is consumed at the rate of 50 g per second in a rocket. The exhaust gases are rejected at the rate of 5×10^5 cms^{-1}. What is the thrust experienced by the rocket?   [Ans. 250N]

_____
_____
_____
_____

_____
_____

49. Two blocks of masses m_1 and m_2 in contact lie on a horizontal smooth surface as shown in fig. The blocks are pushed by a force F. If the two blocks are always in contact, what is the force at their common interface?

_____
_____
_____
_____
_____
_____
_____
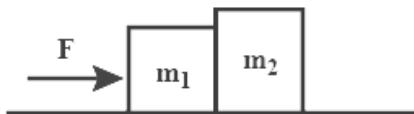

50. A scooter weighs 120 kg f. Brakes are applied so that wheels stop rolling and start skidding. Find the force of friction is the coefficient of friction is 0.4.   [Ans. 48 kg f]

_____
_____
_____
_____
_____
_____

51. A suitcase is gently dropped on a conveyor belt moving at 3 m/s. If the coefficient of friction between the belt and the suitcase is 0.5, how far will the suitcase move on the belt before coming to rest?   [Ans. 0.92m]

_____
_____
_____
_____
_____
_____

52. A block of mass 2kg rests on a plane inclined at an angle of 30° with the horizontal. The coefficient of friction between the block and the surface is 0.7. What will be the frictional force acting on the block?   [Ans. 11.9N]

_____
_____

_____
_____
_____
_____

53.   A child revolves a stone of mass 0.5kg tied to the end of the string of length 40cm in a vertical circle. The speed of the stone at the lowest point of the circle is 3 ms^{-1}. Calculate the tension in the string at this point.   [Ans. 16.15N]

_____
_____
_____
_____
_____
_____

54.   Explain, why
       (a) The passengers are thrown forward from their seats, when a speeding bus tops suddenly.
       (b) Does a cricketer moves his hand backwards while holding a catch?
       (c) Is the boat pushed away when a man jumps out of the boat?

_____
_____
_____
_____
_____
_____

55.   A hammer of mass 1kg moving with a speed of 6 ms^{-1} strikes a wall and comes to rest in 0.1s. Calculate (a) the impulse of force (b) the retardation of the hammer, and (c) the retarding force that stops the hammer.

_____
_____
_____
_____
_____
_____

56.   A 100kg gun fires a ball of 1kg horizontally from a cliff of height 500m. It falls on the ground at a distance of 400m from the bottom of the cliff. Find the recoil velocity of the gun. (acceleration due to gravity = 10 ms^{-2})

_____
_____
_____
_____
_____
_____

57.   Why does a gun recoil on firing? What is recoil velocity? Find the expression for it.
_____
_____
_____
_____
_____
_____

58.   State laws of friction.
_____
_____
_____
_____
_____
_____

59.   A constant force acting on a body of mass 3.0 kg changes its speed from 2.0 ms^{-1} to 3.5 ms^{-1} in 25 s. The direction of the motion of the body remains unchanged. What is the magnitude and direction of the force?   [Ans. 0.18N]
_____
_____
_____
_____
_____
_____

60.   A body of mass 5 kg is acted upon by two perpendicular forces 8 N and 6 N. Give the magnitude and direction of the acceleration of the body.   [Ans. 36.87°, with 8N force]
_____
_____
_____
_____
_____
_____

61. The driver of a three-wheeler moving at a speed of 36 km/h sees a child standing in the middle of the road and brings his vehicle to rest in 4.0 s just in time to save the child. What is the average retarding force on the vehicle? The mass of the three-wheeler is 400 kg, and the mass of the driver is 65 kg. [Ans. 1162.5N]

_____
_____
_____
_____
_____
_____

62. A rocket with a lift-off mass of 20,000 kg is blasted upwards with an initial acceleration of 5.0 ms^{-2}. Calculate the initial thrust (force) of the blast. [Ans. 2.96×10^5N]

_____
_____
_____
_____
_____
_____

63. A truck starts from rest and accelerates uniformly at 2.0 ms^{-2}. At t = 10 s, a stone is dropped by a person standing on the top of the truck (6 m high from the ground). What are the (a) velocity, and (b) acceleration of the stone at t = 11s? (Neglect air resistance.) (Take g = 10ms^{-2}) [Ans. (i) 22.4 ms^{-1}, 26.7°, (ii) 10 ms^{-2}]

_____
_____
_____
_____
_____
_____

64. A bob of mass 0.1 kg hung from the ceiling of a room by a string 2 m long is set into oscillation. The speed of the bob at its mean position is 1 ms^{-1}. What is the trajectory of the bob if the string is cut when the bob is (a) at one of its extreme positions, (b) at its mean position?

_____
_____
_____
_____
_____
_____

65. Figure shows the position-time graph of a particle of mass 4 kg. What is the (a) force on the particle for t < 0, t > 4 s, 0 < t < 4 s? (b) impulse at t = 0 and t = 4 s? (Consider one-dimensional motion only).
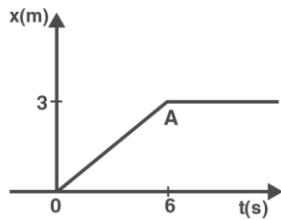

[Ans. 0, 3 kg ms^{-1}, - 3 kg ms^{-1}]

_____
_____
_____
_____
_____
_____

66. Two bodies of masses 10 kg and 20 kg respectively kept on a smooth, horizontal surface are tied to the ends of a tight string. A horizontal force F = 600 N is applied to (i) A, (ii) B along the direction of string. What is the tension in the string in each case?

[Ans. 200N, 400N]

_____
_____
_____
_____
_____
_____

67. Two masses 8 kg and 12 kg are connected at the two ends of a light inextensible string that goes over a frictionless pulley. Find the acceleration of the masses and the tension in the string when the masses are released.

[Ans. 2ms^{-2}, 96N]

_____
_____
_____
_____
_____
_____

68. Two billiard balls, each of mass 0.05 kg, moving in opposite directions with speed 6m/s collide and rebound with the same speed. What is the impulse imparted to each ball due to the other? [Ans. – 0.6 kg/ms, 0.6 kg/ms]

_____
_____
_____
_____
_____
_____

69. A stone of mass 0.25 kg tied to the end of a string is whirled round in a circle of radius 1.5 m with a speed of 40 rev./min in a horizontal plane. What is the tension in the string? What is the maximum speed with which the stone can be whirled around if the string can withstand a maximum tension of 200 N? [Ans. 6.6N, 34.6 ms^{-1}]

_____
_____
_____
_____
_____
_____

70. If in problem 69, the speed of the stone is increased beyond the maximum permissible value, and the string breaks suddenly, which of the following correctly describes the trajectory of the stone after the string breaks:
(a) the stone moves radially outwards,
(b) the stone flies off tangentially from the instant the string breaks,
(c) the stoneflies off at an angle with the tangent whose magnitude depends on the speed of the particle?

_____
_____
_____
_____
_____
_____

71. Figure shows the position-time graph of a particle of mass 0.04 kg. Suggest a suitable physical context for this motion. What is the time between two consecutive impulses received by the particle? What is the magnitude of each impulse?

_____
_____
_____
_____
_____
_____
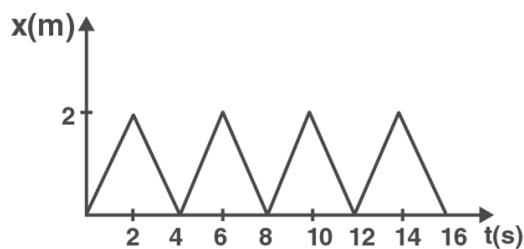

72. Figure shows a man standing stationary with respect to a horizontal conveyor belt that is accelerating with 1 ms^{-2}. What is the net force on the man? If the coefficient of static friction, between the man's shoes and the belt is 0.2, up to what acceleration of the belt can the man continue to be stationary relative to the belt? (Mass of the man = 65 kg.)

_____
_____
_____
_____
_____
_____
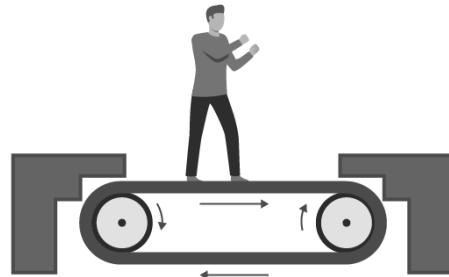

73. A stream of water flowing horizontally with a speed of 15 m/s pushes out of a tube of cross-sectional area 10^{-2} m^2 and hits at a vertical wall nearby. What is the force exerted on the wall by the impact of water, assuming that it does not rebound?

_____
_____
_____
_____

74. Ten one rupee coins are put on top of one another on a table. Each coin has a mass of m kg. Give the magnitude and direction of
(a) the force on the 7th coin (counted from the bottom) due to all coins above it.
(b) the force on the 7th coin by the eighth coin and
(c) the reaction of the sixth coin on the seventh coin.   [Ans. 3mg, 3mg, 6mg]

75. A train runs along an unbanked circular track of radius of 30 m at a speed of 54 km/h. The mass of the train is 10^6 kg. What provides the centripetal force required for this purpose the engine or the rails? What is the angle of banking required to prevent wearing out of the rail?   [Ans. 37.4°]

76. A block of mass 25 kg is raised by a 50 kg man in two different ways as shown in Fig. What is the action on the floor by the man in the two cases? If the floor yields to a normal force of 700 N, which mode should the man adopt to lift the block without the floor yielding?

(a)   (b)
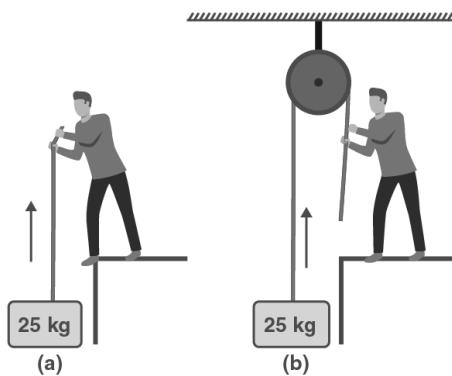

[Ans. 735 N, 245 N]

_____
_____
_____

77. A block of mass 15 kg is placed on a long trolley. The coefficient of static friction between the block and the trolley is 0.18. The trolley accelerates from rest with 0.5 ms^{-2} for 20 s and then moves with uniform velocity. Discuss the motion of the block as viewed by (a) a stationary observer on the ground, (b) an observer moving with the trolley.

_____
_____
_____
_____
_____
_____

78. The rear side of a truck is open and a box of 40 kg mass is placed 5 m away from the open end as shown in Fig. The coefficient of friction between the box and the surface below it is 0.15. On a straight road, the truck starts from rest and accelerates with 2 ms^{-2}. At what distance from the starting point does the box fall off the truck? (Ignore the size of the box). [Ans. 18.57m]

_____
_____
_____
_____
_____
_____
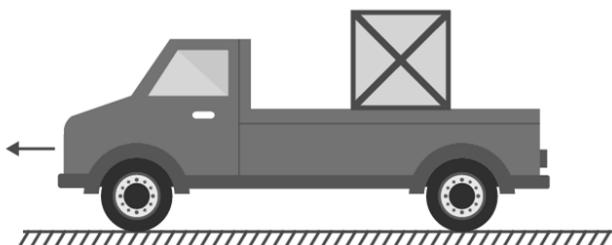

79. A disc revolves with a speed of 33 1/3 rpm and has a radius of 15 cm. Two coins are placed at 4 cm and 14 cm away from the centre of the record. If the coefficient of friction between the coins and record is 0.15, which of the coins will revolve with the disc? (take g = 9.8 ms^{-2}) [Ans. 12cm]

_____
_____
_____

_____
_____
_____

80. You may have seen in a circus a motorcyclist driving in vertical loops inside a 'death well' (a hollow spherical chamber with holes, so the spectators can watch from outside). Explain clearly why the motorcyclist does not drop down when he is at the uppermost point, with no support from below. What is the minimum speed required at the uppermost position to perform a vertical loop if the radius of the chamber is 25 m?[Ans. 15.65 ms^{-1}]

_____
_____
_____
_____
_____
_____

81. A 70 kg man stands in contact against the inner wall of a hollow cylindrical drum of radius 3 m rotating about its vertical axis with 200 rev/min. The coefficient of friction between the wall and his clothing is 0.15. What is the minimum rotational speed of the cylinder to enable the man to remain stuck to the wall (without falling) when the floor is suddenly removed? [Ans. 4.7 rad s^{-1}]

_____
_____
_____
_____
_____
_____

82. A thin circular loop of radius R rotates about its vertical diameter with an angular frequency ω. Show that a small bead on the wire loop remains at its lowermost point for $\omega \leq \sqrt{g} / R$. What is the angle made by the radius vector joining the centre to the bead with the vertically downward direction for $\omega = \sqrt{2g} / R$? Neglect friction. [Ans. 60°]

_____
_____
_____
_____
_____
_____

83. Figure shows an estimated force time graph for a base ball struck by a bat.
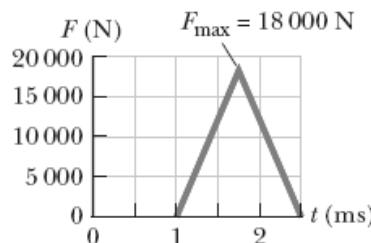

From this curve, determine (i) impulse delivered to the ball (ii) force exerted on the ball (iii) the maximum force on the ball.

[Ans. (i) 1.35×10^4 kg ms^{-1} (ii) 9000N (iii) 18000 N]

_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____

84. (a) A person of mass m is standing in a lift. Find his apparent weight when the lift is (i) moving upward with uniform acceleration a (ii) moving downward with uniform acceleration a(<g) (iii) falls freely

(b) Explain why, it is easier to pull a lawn mover than to push it.

_____
_____
_____
_____
_____
_____
_____
_____
_____
_____

_____
_____

85. Define the terms static friction, limiting friction and kinetic friction. Draw the graph between friction and applied force on any object and show static friction, limiting friction and kinetic friction in graph.

_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____

86. What is meant by banking of roads? What is the need for banking of a road? Obtain an expression for the maximum speed with which a vehicle can safely negotiate a curved road banked at an angle θ. The coefficient of friction between the wheels and the road is μ.

_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____

87. (a) Why are circular roads banked? Deduce an expression for the angle of banking.
(b) A 1000 kg car rounds a curve on a flat road of radius 50m at a speed of 50 km/h (14m/s). Will the car make the turn or will it skid if the coefficient of friction is 0.60? Justify?

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

88. State and explain the Newton's second law of motion. Hence deduce first and third law of motion from second law of motion. A piece of work is floating on water. What is the net force acting on it?

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

_____

89. Define banking of roads. Also derive an expression for maximum safe velocity of a vehicle on a banked road having coefficient of friction μ. It is easier to roll a barrel than to pull it along the road. Why?

_____

_____

_____

_____

_____

_____

_____

_____
_____
_____
_____

90.   (a) Draw a graph to show the variation of force of friction with the applied force.
       (b) Define angle of repose and deduce the relation with coefficient of static friction.
       (c) A horizontal force of 10N is necessary to just hold a block stationary against the wall.
       Find the weight of the block if coefficient of friction between the block and wall is 0.2.

_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
_____
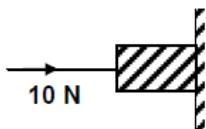

91.   A body of mass 0.40 kg moving initially with a constant speed of 10 ms^{-1} to the north is
       subject to a constant force of 8.0 N directed towards the south for 30 s. Take the instant
       the force is applied to be t = 0, the position of the body at that time to be x = 0, and
       predict its position at t = -5 s, 25 s, 100 s.   [Ans. -50m, -6km, -50km]

_____
_____
_____
_____
_____
_____
_____
_____
_____
_____

92. A man of mass 70 kg, stands on a weighing machine in a lift, which is moving
(a) upwards with a uniform speed of 10 ms^{-1}.
(b) downwards with a uniform acceleration of 5 ms^{-2}.
(c) upwards with a uniform acceleration of 5 ms^{-2}.
What would be the readings on the scale in each case?
(d) What would be the reading if the lift mechanism failed and it hurtled down freely under gravity?
[Ans. (a) 686N, (b) 34.29 kg wt, (c) 105.7 kg wt (d) weightlessness]

93. A helicopter of mass 1000 kg rises with a vertical acceleration of 15 ms^{-2}. The crew and the passengers weigh 300 kg. Give the magnitude and direction of
(a) force on the floor by the crew and passengers,
(b) the action of the rotor of the helicopter on surrounding air
(c) force on the helicopter due to the surrounding air
[Ans. (a) 7500N, vertically downwards (b) 32500N, vertically downwards (c) 32500N, vertically upwards]

94. A monkey of mass 40 kg climbs on a rope (Fig.) which can stand a maximum tension of 600 N. In which of the following cases will the rope break: the monkey
(a) climbs up with an acceleration of 6 ms^{-2}
(b) climbs down with an acceleration of 4 ms^{-2}
(c) climbs up with a uniform speed of 5 ms^{-1}
(d) falls down the rope nearly freely under gravity? (Ignore the mass of the rope).

[Ans. (a) 640 N, (b) 240 N (c) 400 N (d) 0]

95. Two bodies A and B of masses 5 kg and 10 kg in contact with each other rest on a table against a rigid wall (Fig.). The coefficient of friction between the bodies and the table is 0.15. A force of 200 N is applied horizontally to A. What are (a) the reaction of the partition (b) the action-reaction forces between A and B? What happens when the wall is removed? Does the Solution to (b) change, when the bodies are in motion? Ignore the difference between μ_s and μ_k.   [Ans. 177.95N, 192.65N]
