22.	Geometry : Square planar	1 1
(i)	$Slope = -\frac{E_a}{2.303R}$	1
(ii)	$k_1 > k_2$	1
23.	When there is dissociation of solute into ions, in dilute solutions (ignoring interionic attractions) the number of particles increases. As the value of colligative properties depends on the number of particles of the solute, the experimentally observed value of colligative property will be higher than the true value, therefore the experimentally determined (observed) molar mass is always lower than the true value.	1
	For KCl(electrolyte) the experimentally determined molar mass is always	1/2

	lower than the true value when water is used as solvent. Glucose (non-electrolyte) does not show a large variation from the true value.	1/2

26.	Vapour phase refining: It is a refining method in which the metal is converted into its volatile compound and collected elsewhere. It is then	1
	decomposed to give pure metal. Example: Mond's Process for refining of Nickel / van Arkel method for refining of Zirconium	1

	Equations involved:	
	$Ni + 4CO \xrightarrow{330-350K} Ni(CO)_4$	1/2
	$Ni(CO)_4 \xrightarrow{450-470K} Ni + 4CO$	1/2
	OR Extraction of gold involves leaching the metal with CN ⁻ Oxidation reaction: 4 Au (s) + 8 CN- (aq.) + 2H ₂ O (aq.) + O ₂ (g) →4[Au(CN) ₂] ⁻ (aq.) + 4 OH ⁻ (aq.)	1/2
	The metal is recovered by displacement method: $2[Au(CN)_2]-(aq.) + Zn(s) \rightarrow 2 Au(s) + [Zn(CN)_4]^{2-}(aq.)$	1/2
	Zinc acts as a reducing agent.	1/2
27.	The following compound will undergo S _N 1 faster:	
	CH ₂ CI	1/2
	Greater the stability of the carbocation, greater will be its ease of formation from the corresponding halide and faster will be the rate of reaction. The benzylic carbocation formed gets stabilised through resonance.	1/2
